

Try this fun project at home! If you cannot complete the experiment yourself watch the attached video and then complete the activity sheet!

Things you will need if you are trying the experiment yourself!

Celery, food coloring, water and a tall glass.

Step one: break off a little bit of the bottom of the celery.

Step two: take the tall cup and fill it up half way with water.

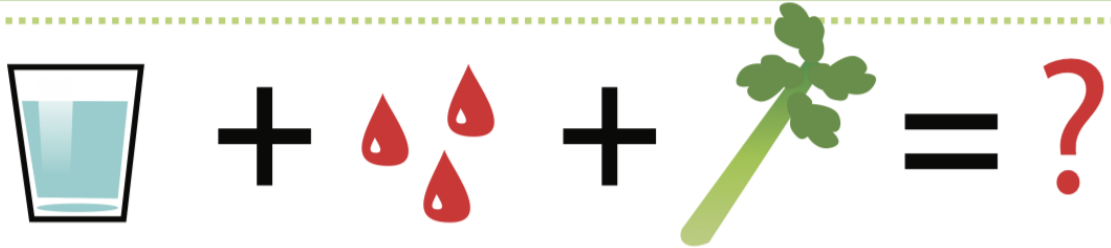

Step three: add a couple of drops of food coloring! The more you add the more of a change you will see!

Step four: Place the celery so bottom of the celery is in the water and then watch as the magic happens! (It may take a day or two for you to see a change!)

[Celery experiment Video](#)

On the next page you will find the activity sheet for this!

Celery Stick Science

Before

Draw a picture and describe what you see.

After

Draw a picture and describe what you see.

What's Happening?

The water has been absorbed into the celery stalk, tinting the stem and leaves red.

Conclusion

Write your thoughts and make a drawing about this experiment.
